

**ENDOSCOPIC CUBITAL TUNNEL
MINIMALLY INVASIVE HAND SURGERY**

**Anatomical Institute,
University Charité, Berlin**

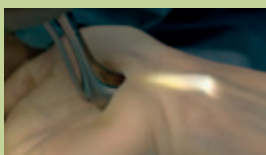

December 13th 2013

**Dr. Reimer Hoffmann
Dr. John D. Lubahn**

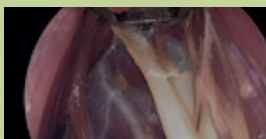

hand surgery

Illuminated specula for hand surgery

Carpal tunnel release with speculum

Endoscopic view of ulnar nerve in the cubital tunnel

The Hoffmann technique of ulnar nerve release

WELCOME

Dear colleagues,

We offer an exclusive course to the international community of hand and plastic surgeons which will be held at the Anatomical Institute of the famous University Charité Berlin.

In an intensive one-day workshop we will show and teach you the techniques of endoscopic nerve surgery of hand and forearm, especially the Hoffmann technique to release the ulnar nerve in the cubital tunnel. In addition, you will be shown the complete spectrum of minimally invasive techniques using the illuminated speculum: trigger finger, de Quervain's tendinitis, tendon transfer to reconstruct EPL, tennis elbow and more.

Dr. Hoffmann, Dr. Lubahn and their team of experts will guide you through the topics and stimulate you to enhance your activities in this exciting new field.

Hoping to see and welcome you in Berlin!

Reimer Hoffmann

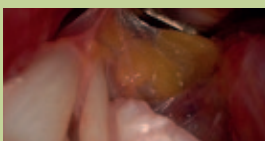

The workshop is supported by

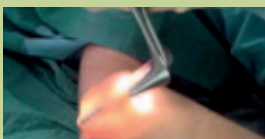

PROGRAM

- 08:30 Welcome
- 08:40 Neurosonography
- 09:00 Anatomy, etiology, endoscopic management of cubital tunnel syndrome
- 09:40 Tips and tricks of endoscopic ulnar nerve release
- 10:00 Endoscopic release of median and radial nerve of the forearm
- 10:20 Coffee break
- 10:50 Learning curve
- 11:15 Minimally invasive hand surgery with the illuminated speculum
- 12:00 Discussion
- 12:30 Lunch break
- 14:00 Hands-on training in the Anatomy department
- 18:00 End of course

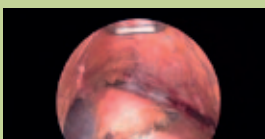

hand surgery

Endoscopic view of released 1st compartment

Illumination of peri-epicondylar area in tennis elbow surgery

Endoscopic view of detached extensor origins at epicondyle

INFORMATION & ORGANISATION

The course directors will be happy to supply more information.

Please contact us by E-mail:
